1 Introduction 5

1 Introduction

This document describes changes that you may need to make to your customization when you upgrade to ACP Release 5.8 as a result of changes to the internal data structures of the CODE TAB compiler in ACP 5.8.

Non-API changes

Although the internal data structures of the CODE TAB compiler are not exposed as a public API, here are the changes made to them in ACP 5.8:

- The compiler generated `<code-table-name>#b` trigger is no longer generated
- The column `TRIG_PROT` in `META_CODE_TAB` (TAB DEF) has been removed

In ACP 5.8, any functionality that relied on these elements must be removed from the code base.
